Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Previously Presented) A method of making a battery electrode, the method comprising:

forming a first layer comprising a cathode mixture on a substrate; removing the substrate from the first layer; and incorporating the first layer into the battery electrode, wherein the cathode mixture is in the form of a slurry.

- 2. (Canceled)
- 3. (Original) The method of claim 1, wherein the substrate comprises a material selected from a group consisting of a polymer, a metal, and paper.
 - 4. (Original) The method of claim 1, wherein the substrate comprises a polymer.
 - 5. (Withdrawn) The method of claim 1, further comprising: forming a second layer comprising the cathode mixture; and contacting the second layer with the first layer.
- 6. (Withdrawn) The method of claim 5, further comprising calendering the first and second layers.

Serial No.: 10/034,901

Filed: December 27, 2001

7. (Withdrawn) The method of claim 5, further comprising calendering the first and second layers under heat.

- 8. (Withdrawn) The method of claim 5, wherein contacting the second layer with the first layer increases the density of the first and second layers.
- 9. (Original) The method of claim 1, further comprising contacting the separated first layer with a current collector.
- 10. (Original) The method of claim 9, further comprising bonding the separated first layer and the current collector under pressure.
- 11. (Original) The method of claim 9, wherein the current collector includes an electrically conductive binder.
- 12. (Withdrawn) The method of claim 1, further comprising laminating the first layer to a plurality of layers, each one of the plurality of layers comprising a cathode material.
- 13. (Withdrawn) The method of claim 12, wherein the cathode material is a selected from a group consisting of a cathode active material, a binder, and a conductive aid.
- 14. (Previously Presented) The method of claim 1, wherein forming the first layer or removing the substrate is performed in a continuous process.
- 15. (Previously Presented) The method of claim 1, wherein forming the first layer and removing the substrate are performed in a continuous process.

16-45. (Canceled)

46. (New) The method of claim 1, wherein the cathode mixture comprises a solvent.

Serial No.: 10/034,901

Filed: December 27, 2001

١,

47. (New) The method of claim 26, further comprising removing a portion of the solvent from the cathode mixture after forming the first layer comprising the cathode mixture on the substrate.

- 48. (New) The method of claim 47, wherein the portion of solvent that is removed is no greater than 1200 ppm.
- 49. (New) The method of claim 47, wherein at least some of the portion of solvent is removed prior to removing the substrate from the first layer.
- 50. (New) The method of claim 1, wherein the cathode mixture comprises a conductive aid.
 - 51. (New) The method of claim 1, wherein the cathode mixture comprises a binder.
 - 52. (New) A method of making a battery electrode, the method comprising: forming a first layer comprising a cathode mixture on a substrate; removing the substrate from the first layer; and incorporating the first layer into the battery electrode, wherein the cathode mixture comprises an electrode active material and a binder.
 - 53. (New) The method of claim 52, wherein the binder comprises a polymer.
- 54. (New) The method of claim 53, wherein the binder is selected from the group consisting of polyvinylidene fluoride, hexafluoropropylene, and polytetrafluoroethylene.
- 55. (New) The method of claim 52, wherein the cathode mixture further comprises a solvent.

4

56. (New) The method of claim 55, wherein the solvent is selected from the group consisting of acetone, methyl ethyl ketone, diisobutyl ketone, methylpyrrolidone, and methyl isobutyl ketone.

- 57. (New) The method of claim 56, further comprising removing a portion of the solvent after forming the first layer on the substrate.
- 58. (New) The method of claim 52, wherein the cathode mixture further comprises a conductive aid.
 - 59. (New) The method of claim 58, wherein the conductive aid comprises carbon.
- 60. (New) A method of making a battery electrode, the method comprising: forming a first layer comprising a cathode mixture on a substrate, the cathode mixture comprising an electrode active material and a solvent;

removing the substrate from the first layer; and incorporating the first layer into the battery electrode.

- 61. (New) The method of claim 60, wherein the solvent is selected from the group consisting of acetone, methyl ethyl ketone, diisobutyl ketone, methylpyrrolidone, and methyl isobutyl ketone.
 - 62. (New) A method of making a battery electrode, the method comprising: forming a first layer comprising a cathode slurry mixture on a substrate; removing the substrate from the first layer; and incorporating the first layer into the battery electrode,

wherein the cathode mixture comprises an electrode active material, a conductive aid, a binder, and a solvent.
